WHAT IS CLAIMED IS:

1. A heat insulator attaching structure for a vehicle exhaust pipe, comprising:

a heat insulator with a cross-section orthogonal to an extending direction

thereof being curved substantially into an arc shape is attached to an exhaust pipe of a

vehicle engine so as to allow distance therebetween;

an attachment member attached to an inner-peripheral face of the heat

insulator, the attachment member being formed with a curved arc-shaped contact

portion and an attachment portion, the attachment portion being formed on an outward

side of the arc-shaped contact portion in a radial direction thereof so as to allow

distance therebetween for attaching the attachment member to the inner-peripheral face

of the heat insulator an inner-peripheral face of the arc-shaped contact portion of the

attachment member contacting an outer-peripheral face of the exhaust pipe; and

a band member fitted around an outer-peripheral face of the arc-shaped

contact portion of the attachment member and the outer-peripheral face of the exhaust

pipe, thereby fastening the attachment member to the exhaust pipe.

2. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 1, wherein blocking edge portions are formed in the attachment member, the

blocking edge portions rising on the outer-peripheral face side, at each of two curved

edge portions of the arc-shaped contact portion.

3. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 2, wherein the attachment portions are formed in the attachment member, each

on an opposite side of each of the blocking edge portions to the arc-shaped contact

Page 27 of 31

portion.

4. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 3, wherein the band member fits between the blocking edge portions.

5. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 2, wherein the blocking edge portions extend in a radial direction between the

exhaust pipe and the heat insulator, a space being provided between the exhaust pipe

and the heat insulator.

6. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 1, wherein the exhaust pipe is substantially J-shaped, and includes a curved

portion and a linear section.

7. The heat insulator attaching structure for a vehicle exhaust pipe according

to claim 6, the heat insulator further comprising a curved section for fitting at least

partially around the curved portion of the exhaust pipe, and a linear section for fitting

at least partially around the linear portion of the exhaust pipe.

8. A saddle-riding vehicle with an engine, comprising:

an air cleaner attached to a rear side of the engine having an air cleaner

element disposed in an upper portion inside an air cleaner case; and

a heat insulator attaching structure for a vehicle exhaust pipe attached to a

front of the engine, the heat insulator attaching structure including:

Page 28 of 31

a heat insulator with a cross-section orthogonal to an extending

direction thereof being curved substantially into an arc shape is attached to an

exhaust pipe of the engine so as to allow distance therebetween;

an attachment member attached to an inner-peripheral face of the heat

insulator, the attachment member being formed with a curved arc-shaped

contact portion and an attachment portion, the attachment portion being

formed on an outward side of the arc-shaped contact portion in a radial

direction thereof so as to allow distance therebetween for attaching the

attachment member to the inner-peripheral face of the heat insulator an

inner-peripheral face of the arc-shaped contact portion of the attachment

member contacting an outer-peripheral face of the exhaust pipe; and

a band member fitted around an outer-peripheral face of the

arc-shaped contact portion of the attachment member and the outer-peripheral

face of the exhaust pipe, thereby fastening the attachment member to the

exhaust pipe.

9. A saddle-riding vehicle with an engine according to claim 8, wherein

blocking edge portions are formed in the attachment member, the blocking edge

portions rising on the outer-peripheral face side at each of two curved edge portions of

the arc-shaped contact portion.

10. A saddle-riding vehicle with an engine according to claim 9, wherein the

attachment portions are formed in the attachment member, each on an opposite side of

each of the blocking edge portions to the arc-shaped contact portion.

Page 29 of 31

11. A saddle-riding vehicle with an engine according to claim 10, wherein the

band member fits between the blocking edge portions.

12. A saddle-riding vehicle with an engine according to claim 9, wherein the

blocking edge portions extend in a radial direction between the exhaust pipe and the

heat insulator, a space being provided between the exhaust pipe and the heat insulator.

13. A saddle-riding vehicle with an engine according to claim 8, wherein the

exhaust pipe is substantially J-shaped, and includes a curved portion and a linear

section.

14. A saddle-riding vehicle with an engine according to claim 13, the heat

insulator further comprising a curved section for fitting at least partially around the

curved portion of the exhaust pipe, and a linear section for fitting at least partially

around the linear portion of the exhaust pipe.

15. An air cleaner for a saddle-riding vehicle, comprising:

an air cleaner element disposed in an upper portion inside an air cleaner case;

and

an air cleaner intake-air duct inserted into the air cleaner case obliquely from

above,

wherein the air cleaner intake-air duct curves inside the air cleaner case and

extends to a position directly underneath the air cleaner element.

Page 30 of 31

16. The air cleaner for a saddle-riding vehicle according to claim 15, wherein

substantially an entire opening portion of the air cleaner intake-air duct inside the air

cleaner case is opposed to a side wall face of the air cleaner case.

17. The air cleaner for a saddle-riding vehicle according to claim 16, wherein

a drain port is provided in a bottom wall portion of the air cleaner case, at a position

upstream of the opening portion in a direction of an air flow at the opening portion of

the air cleaner intake-air duct inside the air cleaner case.

18. The air cleaner for a saddle-riding vehicle according to claim 16, further

comprising an attachment portion on an end of the air cleaner intake-air duct inside the

air cleaner case which is attached to a supporting portion provided in a standing

manner on the bottom wall portion of the air cleaner case.
